

Project Designer – Land Development Department

McClelland Consulting Engineers, Inc. is seeking a Project Designer to join our Land Development Department in our Fayetteville office. This position will be responsible for designs or assisting in the design of construction projects dealing with Land Development projects such as site design for new buildings, recreational facilities, trails, drainage and other site related projects. A Project Designer must also have knowledge of commonly-used concepts, practices and procedures within the fields of civil engineering and landscape architecture.

RESPONSIBILITIES

- Develop construction documents for site development projects using AutoCAD Civil 3D. Construction document sets include site planning, grading and drainage, utilities, erosion control, plan sheets and applicable details.
- Coordinate with the project team to develop and complete projects on time and on budget.
- Complete plan review comments from internal quality control processes and from the city review process.
- Assist the project engineer in completing technical specifications.
- Prepare written communications, applications and reports.
- Review and implement municipal zoning ordinances, geotechnical reports, as well as state and federal codes to ensure project compliance.
- Work in partnership with project managers and engineering staff to identify opportunities and constraints for development sites, assist in municipal meetings and submittals, and complete plan revisions as needed to obtain project approval.
- Preparing for, attending and leading meetings with internal and external clients.

PRIMARY & ESSENTIAL FUNCTIONS

- AutoCad
- 3D modeling including grading plans
- Exercising independent judgement
- Initiative
- Creativity
